OS 39 Final Angular Project

Please be sure from matching the current Requirements

1- we need home page contain header, footer and 9 different products
2- header contain cart counter component, wishlist counter component, navigation links component, username and logout component
3- all products in home page must be rendered from a json object created in the home component and maped with a product model interface, and product card comes from a component named single product
3- each product in the home is clickable and redirecting to single page to show product details
4- cart count in header must be clickable to open a drop down menu contain products and x icon beside each one to remove it from the list
5- in the cart page we need a table with products, it's prices, it's count and x icon to remove it from the table
6- login form and register form each one comes from a different route and all inputs inside the forms comes from child components like what we did on the labs
7- bootstrap and ng-bootstrap required
8- all forms must be created with angular reactive forms not template driven

Please be sure from pushing the src folder only on the github repo and be sure from having your own branch on the same repo, no one push on master or merge branches, branch must be named with your name written in camel case style.

Delivery date will be after 11 days from today to be delivered Tu 9 April 2019 12 PM maximum

Best of luck for all
